CONNECTICUT

INTRODUCTION

“The intended purpose of the State of Reentry Report is to bring public awareness and attention to the level of need for social services among individuals who are incarcerated and will soon be released to the community or are currently under community supervision in Connecticut. It is important to know the demographics and the extent of challenges they face in an effort to enhance localized services and address gaps that will promote successful reintegration and reduce recidivism.”

Scott K. Wilderman, President & CEO Career Resources, Inc.

The *state of reentry* is of great importance to the well-being and public safety of everyone in Connecticut. For almost every person who is incarcerated or under correctional supervision, there is at least one other person and often several children and family members in the community who are suffering alongside them, and praying for their safety and rehabilitation. Once people return back to our communities, the level of assistance and services they receive can have a significant impact on their ability to reunite with their loved ones and remain crime free.

In order to better understand the service needs of the reentry population in Connecticut and shine a light on the magnitude of the challenges they face, the data presented in this report represents a “snapshot of a day-in-time” of people under custody of the Connecticut Department of Correction. Two different subgroups are represented in this report: 1) individuals who were incarcerated on June 1, 2022 with an end of sentence date within six months, and 2) individuals under community supervision on June 1, 2022. The report provides information about their demographics, system involvement, and assessment scores, which are used for treatment and program planning within the correctional system. Assessment areas include substance use, mental health, medical needs, education, and employment. This statewide data is also broken out by the regions covered by Connecticut’s ten Reentry Roundtables. People’s de-identified data within this census are assigned to a region based upon their city or town that was recorded upon admission to jail or prison.

The Call to Action

We hope that the data in this State of Reentry report will be of value to the many advocates and leaders across the state who are working hard to better the lives of people exiting Connecticut’s jails and prisons, and to keep our communities safe. This is the second year in a row that this report has been produced. The idea for this report originated with the co-chairs and other leading members of Connecticut’s Reentry Roundtables located in Bridgeport, Danbury, Hartford, New Britain, New Haven, Northwest CT (Torrington), Southeast CT, Stamford, Waterbury, and Windham.

Each Roundtable represents a collaboration of state and local organizations working together to identify needs and address gaps in services for individuals returning home from incarceration. Individuals with lived experience are encouraged to join this network

CONNECTICUT

and work alongside these providers to find real solutions. Members of the Roundtables build relationships with organizations and agencies across Connecticut to foster successful reentry, eliminate barriers, reduce recidivism, and increase public safety.¹

Over the past several years, as Reentry Welcome Centers were launching and expanding across the state, members of the Roundtables involved in these planning efforts were requesting timely and actionable data about the needs of populations in their regions. For this second year, Career Resources has taken the lead in fulfilling this request on behalf of the regional Roundtables.

Connecticut has many legislative champions for criminal justice reform, who understand the policies needed to end mass incarceration and to eliminate the racial and ethnic disparities within our criminal legal system. Connecticut also is home to many nonprofit organizations and community members who are doing the heavy lifting every day to assist people with reentry, both in formal and informal ways. Documenting the current level of basic needs in the areas of health, education and employment of people within our correctional system on a regional level is intended to enable the members of the Reentry Roundtables to better prepare for people coming home, to strengthen partnerships, and to advocate for resources to match the level of need.

Data Sets & Methods of Analysis

The data sets used in the creation of this report were provided by two state entities: the Connecticut Department of Correction Information Technology Department's Research Unit and the Connecticut Judicial Branch Court Support Services Division Business Intelligence Unit. In addition, the Reentry Welcome Centers of Bridgeport, Hartford, and New Haven provided data on housing stability and homelessness amongst their client populations that they have recorded in 2022.

Connecticut Department of Correction Data

The Connecticut Department of Correction Information Technology Department's Research Unit data was provided at the end of day on June 1, 2022. Individual identifiers were removed prior to transmission to Career Resources, Inc. The first data set is of individuals under community supervision on the day of June 1, 2022 (n =3,209). The second data set is of individuals incarcerated in Connecticut on June 1, 2022 with an end of sentence date before Dec. 1, 2022 (n = 915).

Secondary Analysis of Connecticut Department of Correction Data Sets

The data was aggregated using Excel Software. Within the Connecticut Department of Correction Information Technology Department's Research Unit data, individuals who listed an address outside of Connecticut, or whose town of residence was missing were removed from the census. Of the 915 individuals (unidentifiable) who were incarcerated with end of sentence dates within six months, 44

¹ "CT Reentry Collaborative," *CTReentry.org*. 2022. <https://ctreentry.org/ct-reentry-collaborative>.

CONNECTICUT

were out of state residents or their town of residence could not be determined nor identified with a Reentry Roundtable. This assessment is based on the remaining 871. Since this point-in-time census was restricted to individuals whose sentences were ending within six months, very likely the proportion of people incarcerated with longer sentences are underrepresented in this subgroup, and those with sentences under six months are overrepresented as compared to the sentenced prison population as a whole.

Drawing upon OPM Monthly indicators report data, we calculated that this census represented 14.7% percent of the total CTDOC *Sentenced* prison population statewide (n=5,887) who were incarcerated on June 1, 2022 and 8.9% percent of the total number of people incarcerated on that day (n=9,708), including pre-trial detainees². The number of unique individuals with sentences ending within six months spanning a full year in Connecticut would be significantly higher.

Of the 3,209 individuals (unidentifiable) under community supervision for which data was received, 186 were out of state residents or their town of residence could not be determined nor identified with a CT Reentry Roundtable. This assessment is based on the remaining 3073.

Connecticut's estimated population was 3,626,205 on July 1, 2022³ according to the U.S. Census, which means that approximately 85 per 100,000 population on June 1, 2022 were under CTDOC community supervision. The number of unique individuals under CTDOC community supervision spanning a full year in Connecticut would be significantly higher.

Connecticut Judicial Branch Court Support Services Division Housing Stability Data

The Connecticut Judicial Branch Court Support Services Division (CSSD) Business Intelligence Unit provided three sets of surveyed population data focused specifically on housing security for those in DOC custody on June 1, 2022. Individual identifiers were removed prior to transmission to Career Resources, Inc. The first population set was of individuals incarcerated in Connecticut on June 1, 2022 with an end of sentence date before Dec. 1, 2022 (n = 913). The second set of data was of individuals under community supervision (either on parole or in half-way house transitional housing) on the day of June 1, 2022 (n =3,012). The third population set was of individuals in pre-trial detention on June 1, 2022 (n=2,600).

The survey is a relatively new housing assessment tool being used by CSSD started in 2020. CSSD does not have contact with sentenced individuals in custody. Thus, the housing assessment survey data was obtained as part of their CSSD case processing, most commonly at pre-trial services (bail), family services,

² *Monthly Indicators Report* (2022, June). OPM-Criminal Justice Policy & Planning Division. <https://portal.ct.gov/-/media/OPM/CJPPD/CjResearch/MonthlyIndicators/2022-MONTHLY-INDICATOR-REPORTS/Monthly-Indicators-Report-June-2022.pdf>

CONNECTICUT

and/or adult probation stages. Probation, because of the nature of the work, does an intake and a discharge survey. Family and pre-trial services only conduct surveys on the intake side since they typically do not hold cases very long.

Total count of the three DOC custody populations on June 1, 2022 was 6,525. The data is the most recent housing assessment of these individuals due to the nature and process of encounters by CSSD with the three populations in DOC custody—so much of the data is *historical*. The most recent housing assessment in the data sets is June 1, 2022. The oldest housing assessment is July 13, 2020.

Sixty-one percent (61%) of the individuals in DOC custody were not assessed. It is surmised at this time that individuals without housing survey data fell within the time between when CSSD started collecting this data on a regular basis and when individual's particular cases were processed. Additionally, if an individual processes through without contact with CSSD personnel then there would be no data for the housing survey.⁴

Limitations

Point in Time Census

The number of people in the CTDOC system fluctuates daily depending on new admissions, discharges/releases of people, seasonality, and other external conditions. Historically, the daily count in jails midyear is higher than the daily count at the end of the year, due to seasonal variation. Annual point-in-time counts when used for forecasting will tend to overrepresent people who have been incarcerated for longer periods of time and underrepresent people incarcerated for shorter periods of time. With only one point-in-time census we cannot determine the variability of these counts over the course of any given year or the total number of individuals reentering annually. The demographics and need scores expressed as percentages of people within each region could vary considerably, especially for those regions and response items with fewer people represented. For example, in monthly forecasting, it is usually recommended to have at least 50 observations per category. Inferences drawn from the data presented in this report should be made with caution and are best corroborated by other trend data and/or observations of people in the field.

Regional Reentry Council/Roundtable Assignment

For both sets of data, the town or city of residence at the time of admission to CTDOC is used to assign an individual to one of Connecticut's ten Reentry Roundtables. This one-day count may approximate the number of people who were eligible to receive reentry services in each region on June 1, 2022. However, some individuals who were released at the end of their sentences or placed under community supervision may have ended up residing in a town or city in a different region from whence they arrived.

⁴ Note: There is a slight difference in DOC and Judicial Branch CSSD counts of End of Sentence within six months (n=2) and in Community Supervision (parole or transition housing) (n=197). The differences between the two counts could not be resolved at the publishing of this report.

CONNECTICUT

Structure of Report Findings and Notes on Terminology

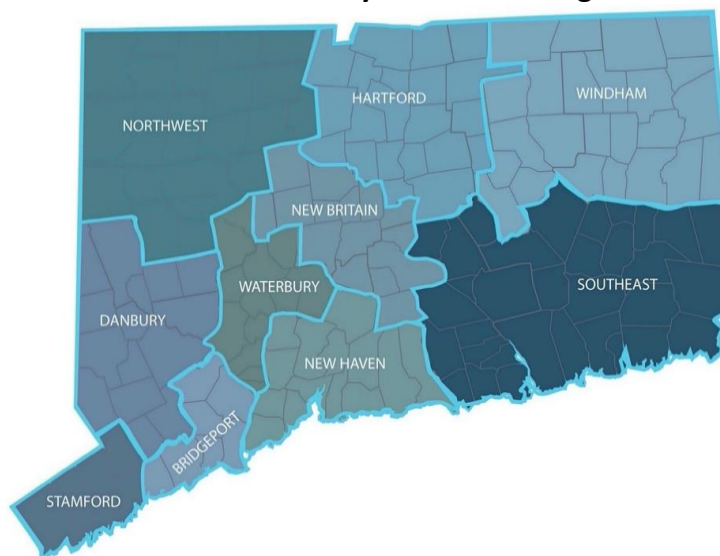

The Connecticut State of Reentry report contains descriptive analysis of the point-in-time census on June 1, 2022 for people incarcerated and on CTDOC community supervision across the entire state. First, we provide a summary of key findings from the demographic data. This is followed by an infographic section depicting this data. Next, we provide a summary of the key findings from the CTDOC assessment scores for substance use, mental health, medical need, education level, and employment history, followed by an infographic section. In each summary, the subheadings contain an index (e.g. A1) referencing the charts and tables in the infographic sections. Since the number of people incarcerated who were soon-to-be released at the end of their sentences was very small when broken out by region (i.e. four Roundtables represented fewer than 50 people), this report does not provide detailed regional comparisons for this subgroup.

The Connecticut State of Reentry report ends with a summary discussion of the findings from the point-in-time census in relation to the mission of the Reentry Roundtables. This statewide report is followed by a series of mini-reports with the infographics depicting the census data broken out by each of the ten Reentry Roundtable regions.

Note on Use of Roundtable Names

The regional Reentry Roundtables each use different nomenclature, some use the name Council, others Collaborative, or Roundtable. Also, some use the term Greater [i.e. Greater Hartford Reentry Council, Greater New Haven Reentry Roundtable] to designate the region. Others go by only the city name [Bridgeport Reentry Collaborative] in which the roundtable meets. For the sake of readability, in this report we refer to each either with the term Roundtable or by a short-hand name for the geographical region represented, e.g. 'Stamford' for the Stamford Reentry Council, etc.

Connecticut Reentry Roundtable Regions

CONNECTICUT

SUMMARY OF KEY STATEWIDE FINDINGS

Key Takeaways from this Day-in-Time Census Report

This is the second year in a row that this day-in-time census has been taken. This day-in-time snapshot census adds a perspective that supports the findings of other current research. The demographics of this justice-involved population and their needs for services upon reentry are as follows:

- **Black/African Americans and Hispanic/Latino(a) Americans are disproportionately represented within Connecticut's prison and jails relative to their population size in Connecticut.**
On June 1, 2022, 35% of people currently incarcerated with sentences ending within six months and 41% under community supervision identified as Black/African American versus 12.7%⁵ in the state population. On June 1, 2022, 28% of people currently incarcerated with sentences ending within six months and 28% under community supervision identified as Hispanic/Latino(a) versus 17.7% in the state population.
- **Non-Hispanic White Americans represent the second largest racial/ethnic group within Connecticut's prisons and jail system, while they constitute the majority of the state's population.**
On June 1, 2022, 36% of people currently incarcerated with sentences ending within six months and 31% under community supervision identified as non-Hispanic White, while they constitute 64.6% of the state population.
- **Problem substance use, mental and physical health issues, low levels of high school graduation rates, very limited employment history, homelessness and housing instability present challenges to successful reintegration.**

Substance Use

For people incarcerated with sentences ending within six months, 94% reportedly had a substance use problem. Many had a moderate use problem at 32%. However, an astounding 50% had a serious or extremely serious substance abuse problem. Similarly, 89% of individuals under community supervision statewide were identified as having a substance use problem, with 39% having a moderate use issue and 40% having serious or extremely serious substance abuse issue.

Mental Health

Of the people incarcerated with an end of sentence date within six months, 34% had a moderate to severe mental health disorder. Sixty-two percent (62%) of community supervised individuals statewide were identified as having a mental health diagnosis history, with 21% of those individuals having moderate to serious mental health issues.

⁵ Source: U.S Census Bureau at <https://www.census.gov/quickfacts/fact/table/CT/PST045221#qf-headnote-a>

CONNECTICUT

Medical Needs

Only 25% of people incarcerated with sentences ending in six months were assessed as having no need for nursing care; conversely 75% of people required at least some level of nursing care. As many as 34% needed access to 16-hour nursing care (during the day). As many as 5% needed access to, or were in current need of, full-time 24-hour nursing care. Seventy-two percent (72%) of community supervised individuals statewide needed some nursing care, with 35% requiring either access to daytime (16-hour) or 24-hour (full-time) nursing care.

Education

Sixty-two percent (62%) of the incarcerated population whose sentences were ending within six months did not have a high school diploma. Forty-six percent (46%) of community supervised individuals in Connecticut did not have a high school diploma.

Employment History

Ninety-four percent (94%) of individuals who were incarcerated with sentences ending within six months, had less than five years of employment history or vocational training. Eighty-five percent (85%) of community supported individuals in Connecticut had five years or less of employment or vocational training. Thirty-two percent (32%) had two years or less of employment experience, with 4% never employed.

Homelessness and Housing Insecurity⁶

The Connecticut Judicial Branch Court Support Services Division staff conducts housing stability surveys of those in DOC custody as a part of the process of pre-trial services (bail), family services, and adult probation. Of those individuals incarcerated with an end of sentence date within six months 22% reported no housing option upon release. Sixteen percent (16%) of individuals in pre-trial detention and 18% in the community on parole or in transitional housing reported no housing option upon release. Sixty-one percent (61%) of all individuals in DOC custody were not assessed for housing stability.

However, at the state's new Reentry Welcome Centers (RWCs) which are in different phases of beginning operations of providing support and career education services to returning citizens, through a grant from the Connecticut Office of Workforce Strategy, found more dire housing instability numbers. For the full year of 2022, the New Haven Reentry Welcome Center (RWC) tracked 58% of their clients as experiencing housing instability, a substantial number of them homeless. The Hartford RWC found of its clients providing housing data (N=71) 66% were homeless. The Bridgeport RWC reports that from June 1, 2022 to December 31, 2022, forty-six percent (46%) of its clients as

⁶ This is historical data of individuals in current DOC custody meeting this study's time parameter of June 1, 2022. The most recent housing data obtained from these populations range from 6/1/2022 – 7/13/2020. Please see page 23 for more detail.

CONNECTICUT

having housing instability and are either in a shelter bed, couch surfing, or street homeless. To learn more about this issue, a uniform housing stability tracking system is being developed for all five Connecticut Reentry Welcome Centers in 2023.

Overview of Infographic and Other Sections to Follow

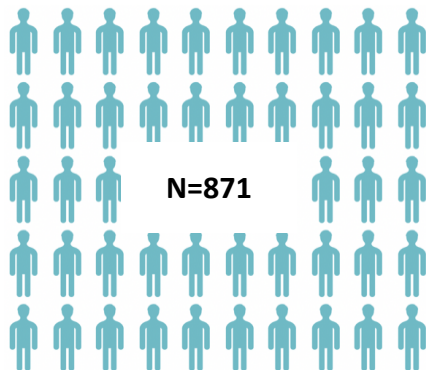

The next section contains the infographics depicting the statewide demographic and supervision data for the point-in-time census for the people who were incarcerated whose sentences ended within six months, and for individuals under CTDOC community supervision. The statewide report ends with a discussion of the key findings from the statewide point-in-time counts. Each Regional Roundtable infographic is then provided in alphabetic order.

Not Assessed	265	29%	2265	75%	1447	56%	3977	61%
Total Population	913		3012		2600		6525	
Oldest Assessment	9/21/2020		7/28/2020		7/13/2020		7/13/2020	
Most Recent Assessment	6/1/2022		6/1/2022		6/1/2022		6/1/2022	

The CSSD survey is a relatively new housing screening assessment tool, started in 2020. CSSD does not have contact with sentenced individuals in custody. Thus, for End of Sentence individual responses all the housing assessment survey data is historical and was obtained as part of their CSSD case processing, most commonly at pre-trial services (bail), family services, and/or adult probation stages. The most recent housing assessment in the data sets is June 1, 2022. The oldest housing assessment is July 13, 2020.

How the question was asked (“Does the Individual Have A Safe Place to Live after DOC Custody?” or “Where Is the Individual Currently Staying?”) depends on at what stage of the CSSD case management process the individual was asked the housing question. Probation, because of the nature of the work, does an intake and a discharge survey. Family and pre-trial services only conduct surveys on the intake side since they typically do not hold cases very long.⁷

⁷ There is a slight difference in DOC and Judicial Branch CSSD counts of End of Sentence within six months (n=2) and in Community supervision (parole or transition housing) (n=197). The differences between the two counts could not be resolved at the publishing of this report.

CONNECTICUT

DISCUSSION OF KEY FINDINGS

While the incarceration rate in Connecticut (278 per 100,000) has decreased dramatically over the past ten years⁸, it is still considerably higher when compared with the incarceration rates of countries, such as the UK (129), Canada (106), and France (93).⁹ Over the past 3 years, in the context of the pandemic, the Connecticut prison population, while substantially lower than prior years, continues to be substantially higher than forecasted.¹⁰ This suggests that while diminishing, there is still a considerable pool of incarcerated individuals, most of whom will, eventually, reenter the community. In November of 2022, for example, 714 individuals were released from prison, and another 721 “release events” from pre-trial confinement or bond occurring. Overall in 2022, there were 7,772 individuals released or otherwise discharged back to the community.¹¹ It is important to note that 50% of Connecticut’s incarcerated population come from six Connecticut cities, yet those cities only represent 17% of the state’s overall population.¹² Communities must be ready for these releases with an array of supports including housing, employment opportunities, occupational training, physical and mental health supports, and substance use disorder treatment. In a recent National Institute of Justice study, services oriented toward individual change — such as substance abuse treatment, cognitive-focused programs, and education — were found to have beneficial effects on the recidivism rate.¹³

Housing, in particular, is a critical need for those reentering Connecticut communities, and there is a real lack of data upon which decisions regarding policies, programs and funding can be based. Sixty-one percent (61%) of those in DOC custody, as reported by the Connecticut Judicial Branch Court Support Services Division, were not assessed for potential housing instability upon release.

As of December 2022, ninety-three (93%) of incarcerated individuals are men; 62% are between the ages of 25 and 44. Forty-three percent (43%) are black and 28% Hispanic. These percentages are vastly different than the incidence of these categories in the population and suggest that we need to consider the potential implications of these disparities, from prevention strategies, diversion policies, and sentencing policies, throughout periods of incarceration all the way through reentry service design.

CONNECTICUT

When we examine the substance use, mental health, employment, and medical need scores for those under CTDOC custody, this snapshot of the population reaffirms much of what we know from other sources nationally. People who are in the criminal justice system suffer from high rates of substance use¹⁴, mental health¹⁵, and medical needs.¹⁶ These problems are made worse by their high unemployment levels, and lack of basic needs such as food, shelter, clothing and quality medical care.

The low levels of educational attainment and many years of unemployment or under-employment are areas which can be addressed through job training and entrepreneurial programs, both within the prison and on the outside. There is enough evidence that shows these programs can and do work. However, it is critical that the skills and areas in which people are trained, match the needs of the job market. And we must have a sufficient number of employers willing to give people with criminal records an opportunity to demonstrate their value as employees and to pay them living wages.

The low rates of marriage in this population relative to the number with dependent children, show a pattern that is concerning for the wellbeing not only of fathers being able to remain connected with their children, but also of children who experience the loss of a parent due to incarceration. Connecticut has done well to invest in programs for children of incarcerated parents and fatherhood programs that support the needs of families impacted by incarceration. But resources are unevenly distributed across the state and many children and families still face obstacles to receiving the support they need to become resilient in the face of this traumatic experience.

When one combines Connecticut's stark recidivism numbers with data in this report demonstrating the high level of treatment and programming needs among people in CTDOC custody, we have a clear picture of why evidence-based reentry services are needed within our state. According to Connecticut Department of Correction (DOC), December 2022 monthly admissions data provided by OPM, *Trends in Connecticut's Criminal Justice System Report*, there were 40% fewer people incarcerated than just ten years ago. If incarceration rates continue to remain low the state may consider closing additional prisons. The savings recognized to taxpayers in closing these prisons can be substantial. However, it should be considered that a portion of savings be redirected into the community as part of a Justice Reinvestment initiative. Simply put, Justice Reinvestment is a data driven approach to reduce corrections spending and redirect the savings into other criminal justice strategies that decrease crime and strengthen neighborhoods. Some of the strategies could include providing much needed stable funding for Reentry Welcome Centers or for diversionary programs like Hang Time and iBest Second Chance Programs.
